

LX-LIGHT SERIES

Important Notes Regarding Carry-On Baggage for the LX Light Series

The SB-L01 battery pack (lithium-ion battery) for the LX Light Series qualifies as a “restricted hazardous material” under aviation regulations.

When transporting by air, the battery (lithium-ion battery) must be removed.

When boarding an aircraft, remove the battery from the main unit. To prevent accidental activation during transport, place each battery individually in a zippered plastic bag or similar container and carry it as carry-on luggage.

* Removed batteries and spare batteries cannot be placed in checked baggage.

* Some airlines may restrict carrying batteries (lithium-ion batteries) in carry-on or checked baggage. Please contact your airline in advance for details.

Lithium-ion Battery for Underwater Strobes SB-L01 Rated Capacity

Li-ion Battery SB-L01

Li-ion Battery for Underwater Light

Dimension $\Phi 66 \times 179\text{mm}$

Weight 116 g

Voltage 7.4 V

Current 3,400 mAh

Consumption 25.16 Wh

When carrying the LX Light Series dedicated battery pack SB-L01 (lithium-ion battery) onboard an aircraft, we recommend saving the above specifications and rated capacity table as a file or printing it out to carry with you.
